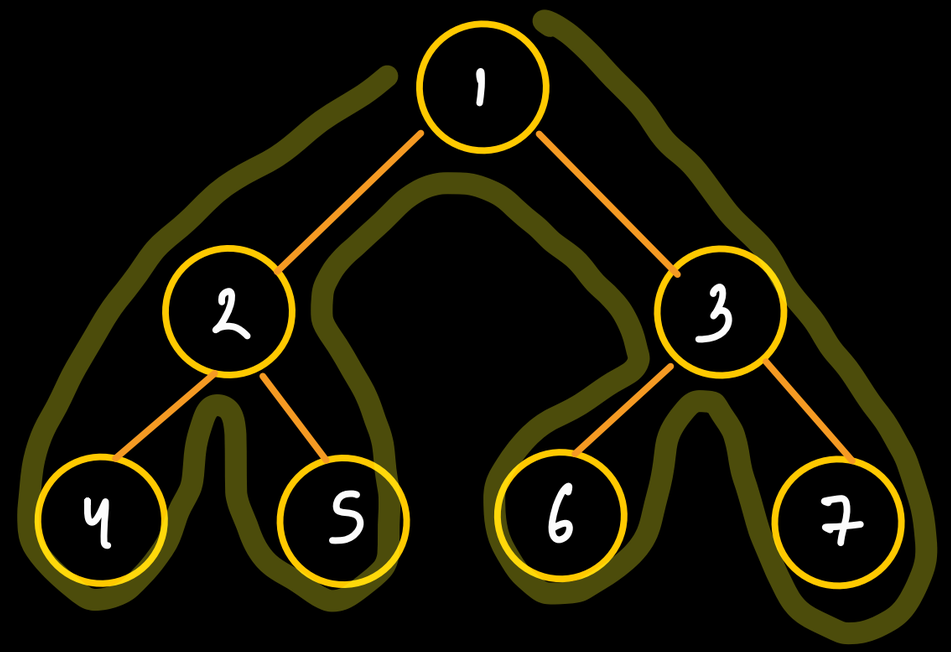
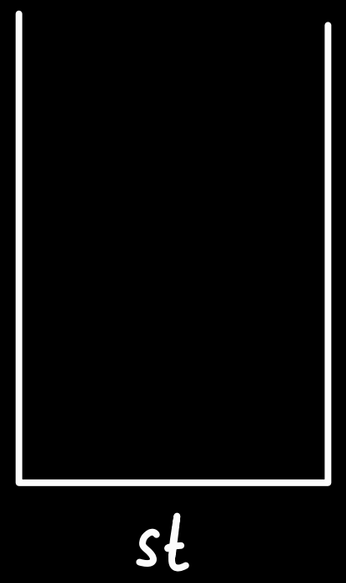
1 2 4 5 3 6 7

Ques: Preorder traversal (Iterative) [Stack is must]





Steps

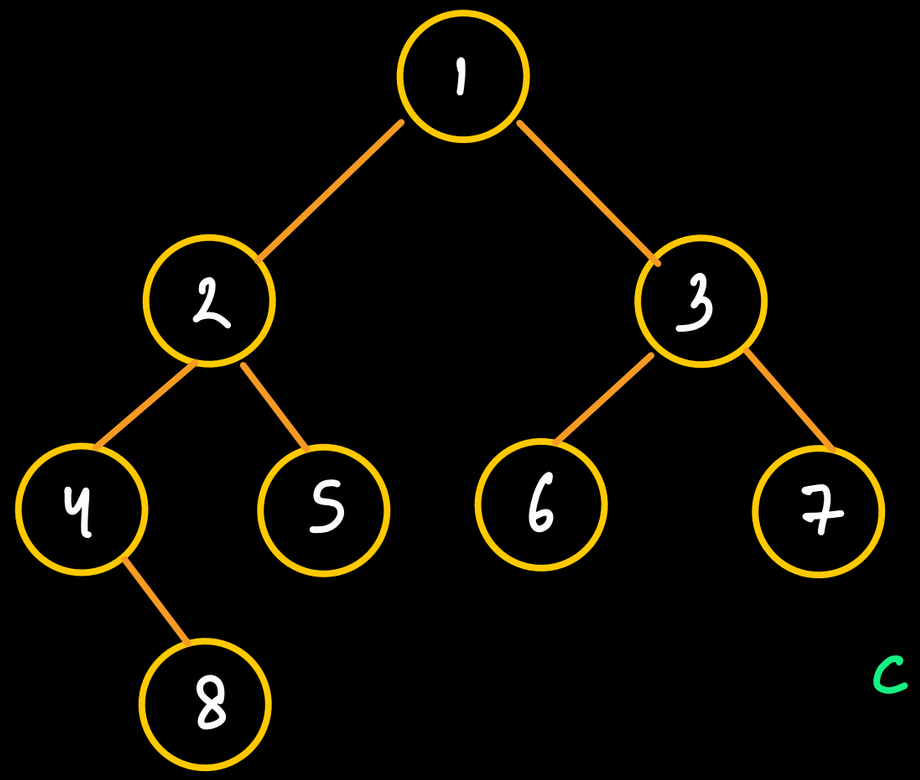
1) pop & print

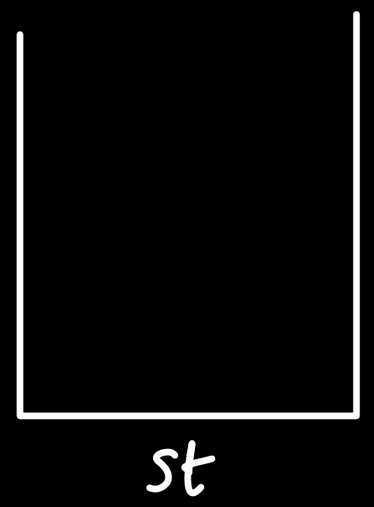
2) push right & then left child

1 2 4 5 3 6 7

4 8 2 5 1 6 3 7

Ques: Inorder traversal (Iterative)



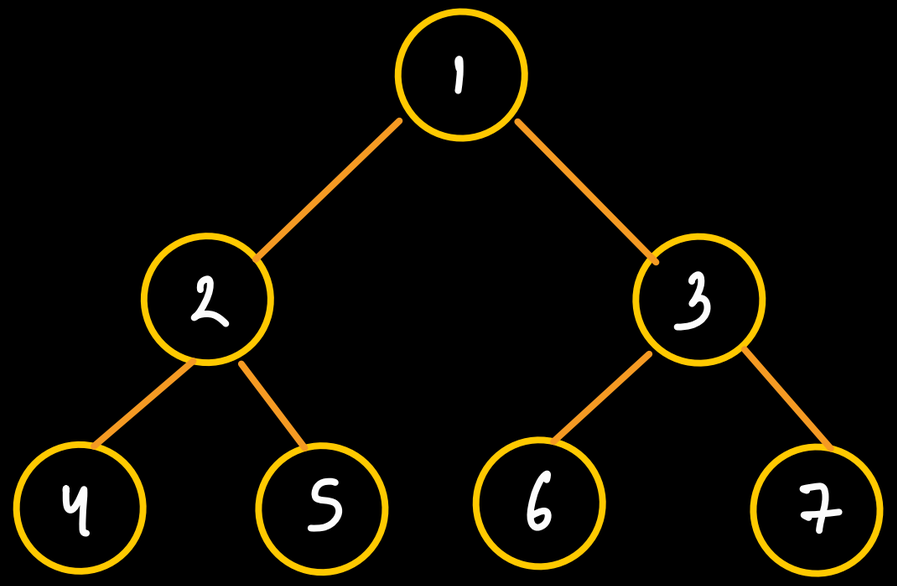


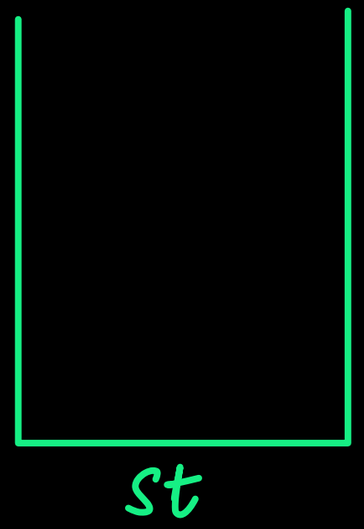
c

ans = { 4 8 2 5 1 6 3 7 }

```
curr = root
while (      ){
    if(curr.left != null){
        st.push(curr.val)
        curr = curr.left
    }
    else {
        visit(curr)
        curr = curr.right
    }
    if(curr == null){
        st.pop & print
        curr = top.right
    }
}
```

Ques: Postorder traversal (Iterative)





1 3 7 6 2 5 4

↓ reverse the array

4 5 2 6 7 3 1

Reverse Preorder : 1 3 7 6 2 5 4

Root R L

Post Order : 4 5 2 6 7 3 1

L R Root
